

Project Performance Test

Date	09 July 2026
Team	
Project Name	Visualizing Housing Market Trends
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot/values
1.	Data Rendered	The Housing_Cleaned dataset was successfully imported into Tableau. It contains housing features such as sale price, bedrooms, bathrooms, flat area, and lot area for analysis. 
2.	Data Preprocessing	Data preprocessing involved handling missing values, correcting data types, removing duplicate records, renaming columns, and preparing the dataset for accurate visualization and analysis.
3.	Utilization of Filters	Interactive filters such as Age of House and Years Since Renovation were implemented to enable users to analyze house age distribution based on renovation status and gain customized insights dynamically. 
5.	Story Design	The Tableau Story was created to present the housing market analysis in a logical sequence, highlighting house age distribution, renovation status, sale prices, and property features to

provide meaningful market insights.
